Steinn Hauser Magnússon

PROFESSIONAL EXPERIENCE

February 2026 – Present

Cloud Operator, SENEC GmbH

Responsibilities:

- → Management of multiple large-scale Kubernetes clusters using Terragrunt, GitLab CI/CD, Helm templating with 10+ custom charts, and ArgoCD, integrated with monitoring systems such as Grafana, Prometheus, and Alertmanager.
- → Operation of 50+ Ansible-managed servers, including in-depth development of a secure pipeline for automated maintenance updates on WireGuard-connected hosts, with a strong focus on strict access policies and secure networking.
- → Oversight and development of an automated server update and maintenance system featuring custom aptly-based repository mirrors, an API gateway for scheduling host update maintenance slots, dashboards for host package lists and update overviews, and a lightweight golang-based client for automated and mTLS-secured maintenance checks.

March 2023 – January 2026

Software Developer, SENEC GmbH

Responsibilities:

- → Oversaw development, maintenance, and migration of multiple Azure Function App microservices integrating enterprise solutions (CRM, Business Central) with internal and external services.
- → Focused on architectural design and implementation using Terraform and Terragrunt, delivering modularized releases and modern CI/CD pipelines.
- → Contributed significantly to developing a containerized deployment framework for microservices, enforcing strict governance-compliant policies across Azure Key Vault, Storage Account, MongoDB/PostgreSQL, Virtual Network, API Management Service, and Service Bus resources.
- → Demonstrated leadership and communication through team management, stakeholder coordination, and development of frameworks for onboarding and training new team members.

January 2022 – February 2023

Senior Data Scientist, Future Ready AS

Responsibilities:

- → Develop and maintain an application for LLM chatbot technology, providing an online learning platform to simulate call-center conversations to users using Django, Flask API, and Azure-based architecture.
- → Manage frontend, and UX developer teams to design and build an interactive learning platform online.
- → Leadership and communication experience through management meetings with external shareholders and investors, alongside training and management of new team members.

November 2020 – December 2021

Data Scientist, Future Ready AS

Responsibilities:

- → Provide sales analytics of telecommunications data to identify strengths in sales representatives. Developed natural language processing model capable of transcribing calls and capturing key sales techniques which lead to product sales.
- → Extensive use of python libraries such as rasa, numpy, pandas, django, and pyspark.

February 2020 – July 2020

Cluster Project Manager, University of Oslo Physics Department

Responsibilities:

- → Built a rack of computational nodes using hardware donated from the Abel supercomputer.
- → Set up cluster software and node connectivity using the ROCKS High-Performance Computing ISO.

CERTIFICATIONS

ITIL 4 Foundation, IT Service Management certification provided by PeopleCert
Azure Administrator Associate, Microsoft Certification AZ104

EDUCATION

August 2019 – June 2021

MSc. in Computational Science: Physics, University of Oslo, Norway

Thesis: 'Evaluating Approximate Methods for Computing Extracellular Potentials from Neuronal Networks'
Advisor(s): Gaute Einevoll & Espen Hagen | **Grade**: A | **Publication**: Hagen E, Magnusson SH, et al. (2022) [1]

- → The kernel and hybrid Local Field Potential (LFP) approximation methods from Hagen E et al. (2016) [2] were applied in various network conditions, and a thorough evaluation of the methods was conducted.
- → Neuronal networks were simulated using python and the LFPy library, where computational optimizations of the local field potential (LFP) signals were of particular interest.

Spring Semester 2019

Theoretical Physics, McGill University, Montréal Canada

August 2016 – June 2019

BSc. In Physics and Astronomy, University of Oslo, Norway

Key Projects:

- → **4D Space Numerical Workshop, Kobe University:** Conducted numerical simulations of the effects of the ionosphere on the NORSAT-1 satellite using the Kobe University supercomputer.
- → **CaNoRock XVI, Andøya Norway:** Conducted numerical simulations of rocket trajectory prior to launch to estimate drag coefficient and landing site.

SKILLS

Languages: English (Native), Icelandic (Native), Norwegian (Fluent), German (Working Proficiency)
Technologies: Advanced: Python, Terraform, Kubernetes, Docker, Linux, Azure, Git, AWS

VOLUNTEER EXPERIENCE

September 2024 – January 2025

Guest Developer, Max Planck Institute for Human Cognitive and Brain Sciences

- → Assisted with developing, packaging, and formalizing a tool for cardiac artefact removal in spinal electrophysiology data into an open-source library [3]

January 2017 – June 2020

Mathematics Tutor, ENT3R
